Education

Bachelor of Science in Computer Science, University of South Florida **July 2023 – December 2026**

- GPA: **3.65**/4.0 Tampa, FL

Technologies

Languages: TypeScript, C#, Python, SQL, JavaScript
Backend: REST APIs, server-side auth & session management, async job processing & background workflows, webhooks, idempotent operations, rate limiting, .NET (C# / Windows Forms)
Data: PostgreSQL (Supabase), relational schema design, indexing strategies, query optimization (EXPLAIN / execution plans)
Cloud/DevOps: Oracle Cloud (OCI - Ubuntu VM), Docker, Docker Compose, GitHub Actions (CI/CD), cron, Cloudflare (DNS, SSL/TLS, Tunnel), Vercel, n8n
Frontend (supporting): React, Next.js (App Router), Tailwind CSS

Experience

Software Engineer — Backend Platform, DeepVisor (SaaS, in development) **Feb 2024 – Present**

- Designed and operated a backend service acting as the source of truth between the frontend and PostgreSQL, exposing REST APIs with strict validation, consistent error responses, and stable contracts.
- Built SSR-safe authentication and session management using Supabase (server-side cookies and middleware), enforcing route-level access control and secure redirects for protected resources.
- Implemented subscription billing infrastructure with Stripe by creating Checkout sessions, verifying subscriptions, and persisting plan tiers, billing periods, and invoice metadata for auditability.
- Developed asynchronous job orchestration endpoints coordinating queued work via a jobs table and external n8n workflows, enforcing timeouts and updating job status for reliability and observability.
- Integrated server-to-server ingestion from external APIs using pagination and idempotent upserts to safely handle retries, rate limits, and concurrent requests.
- Modeled relational schemas and introduced targeted indexing and pre-aggregated daily/weekly tables to support read-heavy dashboards and reduce query latency under scale.

Coding Instructor, Codecraft Works **Jun 2024 – Aug 2024**

- Taught JavaScript, HTML, and CSS to 10–15 middle-school students using project-based learning and iterative development.
- Introduced Lua scripting through Roblox Studio, guiding students to design and implement interactive game mechanics and UI elements.

Projects

MarketPulse — *C#/.NET Windows Forms financial data dashboard* **Aug 2025 – Present**

- Built a C#/.NET application consuming external market data APIs using async HTTP and JSON parsing, with input validation and error handling.
- Designed modular data, service, and UI layers to enforce separation of concerns and enable scalable feature expansion.
- Implemented technical indicators (SMA, EMA) and time-series visualizations to support exploratory market analysis.

Leadership & Involvement

Outreach Director, SHPE — University of South Florida **Aug 2025 – Present**

- Led external outreach for HackaBull, coordinating multiple directors to secure sponsorships and industry partnerships.
- Collaborated with a Microsoft Dynamics Product Manager to redesign outreach and follow-up workflows, improving operational efficiency across SHPE leadership.
- Organized a Citi Tampa corporate office tour for 25+ members, expanding industry exposure and early-career access.
